pakistan**

CONTENTS:

COMMANDS:

- **CREATE**
 - **DESCRIBE**
 - **INSERT INTO**
 - **UPDATE**
 - **AS**
 - **DSITINCT**
 - **ORDER BY**
 - **WHERE clause**
 - **SELECT COMMAND**
 - **ARITHMETIC OPERATORS**
 - **RELATIONAL OPERATORS**
 - **LOGICAL OPERATORS**
 - **AND BETWEEN**
 - **IN**
 - **LIKE**
 - **NULL and NOT NULL**
 - **AGGREGATE FUNCTIONS**
 - **GROUP BY**
 - **HAVING**
-

IMPLEMENTATIONS OF DIFFERENT COMMANDS ON MYSQL ;

○ DENTAL_CLINIC DATABASE:

First of all create database which you want to made as per according to your desire by using the syntax.

Syntax:

CREATE DATABASE DATABASE_NAME;

```
mysql> CREATE database dental_clinic;
```

- Use your already made database as by use the words as;

Syntax:

USE database_name;

```
mysql> use dental_clinic;
Database changed
```

➤ CREATE command:

It's used for the creation of tables.

Evolving the following statement;

Syntax:

CREATE TABLE TABLE_NAME(COLUMN_1,COLUMN_2.....);

Example:

Patient Table:

```
mysql> CREATE TABLE patient(p_id INT(7) PRIMARY KEY ,
-> FirstName varchar(27),
-> LastName varchar(27),
-> DOB date NOT NULL);
```

Dentist Table;

```

q1> create table dentist(d_id INT(3)
-> FirstName varchar(27),
-> LastName varchar(34);

```

Use of DESCRIBE COMMAND:

It's also can be used as the **DESC** shortly.

Syntax:

DESC TABLE_NAME;

Examples:**VISIT TABLE:**

```

mysql> desc visit;
+-----+-----+-----+-----+-----+-----+
| Field | Type | Null | Key | Default | Extra |
+-----+-----+-----+-----+-----+-----+
| v_id  | int  | NO   | PRI | NULL    |       |
| visitDate | date | NO   |     | NULL    |       |
| reason | varchar(60) | YES |     | NULL    |       |
| Pain_level | int | YES |     | NULL    |       |
| FollowUp_visit_id | int | YES | MUL | NULL    |       |
| p_id  | int  | NO   | MUL | NULL    |       |
| d_id  | int  | NO   | MUL | NULL    |       |
| t_id  | int  | NO   | MUL | NULL    |       |
| r_id  | int  | YES  | MUL | NULL    |       |
+-----+-----+-----+-----+-----+-----+
9 rows in set (0.03 sec)

```

➤ INSERT COMMAND:**Syntax:**

INSERT INTO TABLE_NAME VALUES (COLUMN_1'S VALUES,C_2,.....);

Example:

```

mysql> INSERT INTO appointment Values(41,91,21,11,'SN-001'),(42,92,22,12,'SN-002'),(43,93,23,13,'SN-003');
Query OK, 3 rows affected (0.01 sec)
Records: 3 Duplicates: 0 Warnings: 0

```

➤ **SELECT * command:**

This command is used for the displaying all and every single attribute's **values** on the command prompt.

Syntax:

SELECT * FROM TABLE_NAME;

Example:

VISIT table:

```
mysql> select * from visit;
```

v_id	visitDate	reason	Pain_level	FollowUp_visit_id	p_id	d_id	t_id	r_id
91	2004-09-29	Routine dental checkUp	4	NULL	1	2	101	31
92	2001-12-29	ROOT CANAL	7	NULL	3	3	201	32
93	2002-01-19	ROOT CANAL	4	92	3	3	201	33

rows in set (0.06 sec)

➤ **SELECT one/multiple column :**

This command is beneficial at that support while you are dealing with to come out the single one and the multiple attributes from a table rather than all of the attributes. Only a **certain** or **specific** values will be come out by this.

Syntax:

SELECT COLUMN_NAME FROM TABLE_NAME;

Example:

```
mysql> select * from medication;
```

m_id	Name	Dosage
11	Ibuprofen	200 mg
12	Amoxicillin	500 mg
13	Paracetamol	500 mg

3 rows in set (0.00 sec)

➤ ALTER command:

Used to alter the table and including other attributes or **inserts** more data into the table.

Syntax:

ALTER TABLE TABLE_NAME ADD COLUMN_NAME CONSTRAINT;

Example:

```
mysql> ALTER TABLE dentist ADD salary INT(255);
Query OK, 0 rows affected, 1 warning (0.04 sec)
Records: 0 Duplicates: 0 Warnings: 1
```

➤ AS COMMAND on MySQL:

This is basically used to make an alias of the attribute. It's helpful where you want to access the already attribute name with the new one as you want.

Syntax:

SELECT COLUMN_NAME AS ALIAS FROM TABLE_NAME;

```
mysql> SELECT p_id AS Patient FROM patient;
+-----+
| Patient |
+-----+
| 1       |
| 2       |
| 3       |
+-----+
3 rows in set (0.00 sec)
```

➤ DISTINCT COMMAND:

This command is used for duplicacy removal from your table if exist.

Syntax:

SELECT DISTINCT COLUMN_NAME FROM TABLE_NAME;

```
mysql> select DISTINCT reason from visit;
+-----+
| reason |
+-----+
| Routine checkup |
| Tooth Pain      |
| Braces consultation |
+-----+
3 rows in set (0.00 sec)
```

➤ WHERE clause in SQL:

Where command is work as such like fro the condition .

Syntax:

SELECT * FROM TABLE_NAME WHERE COLUMN="VALUE";

Example:

```
mysql> UPDATE visit SET r_id = 33 where v_id =93;
Query OK, 1 row affected (0.01 sec)
Rows matched: 1 Changed: 1 Warnings: 0
```

➤ ORDER BY command:

It's used for the ascending or descending order sorting. By default ascending sort is done by the complier.

Syntax:

SELECT COLUMN_NAME FROM TABLE_NAME ORDER BY COLUMN_2 DESC;

Example:

```
mysql> select *from patient ORDER BY p_id DESC ;
+----+-----+-----+
| p_id | p_name | dob      |
+----+-----+-----+
| 103  | Ahmad  | 2006-09-14 |
| 102  | Zainab | 2005-01-04 |
| 101  | Sara   | 2002-11-10 |
+----+-----+-----+
3 rows in set (0.00 sec)

mysql> select *from patient ORDER BY p_id ASC ;
+----+-----+-----+
| p_id | p_name | dob      |
+----+-----+-----+
| 101  | Sara   | 2002-11-10 |
| 102  | Zainab | 2005-01-04 |
| 103  | Ahmad  | 2006-09-14 |
+----+-----+-----+
3 rows in set (0.00 sec)
```

➤ OPERATORS IN SQL:

Arithmetic operators including (+,-,*,/).

Syntax:

SELECT COLUMN_NAME OPERATOR FROM TABLE_NAME WHERE COLUMN_NAME="VALUES";

Or

SELECT COLUMN_NAME FROM TABLE_NAME WHERE COLUMN_NAME OPERATOR ANY OPERATION;

```
mysql> select salary+5000 as salary_bonus from dentist where d_id='4';
+-----+
| salary_bonus |
+-----+
|          55000 |
+-----+
1 row in set (0.00 sec)

mysql> select salary-6000 as salary_deduct from dentist where d_id='5';
+-----+
| salary_deduct |
+-----+
|          24000 |
+-----+
1 row in set (0.00 sec)

mysql> select salary+500*12 as salary_bonus from dentist where d_id='4';
+-----+
| salary_bonus |
+-----+
|          56000 |
+-----+
1 row in set (0.00 sec)
```

➤ Relational operators:

These operators including (>,<,>=,<=,==,!=)

Syntax:

SELECT COLUMN_NAME OPERATOR FROM TABLE_NAME WHERE COLUMN_NAME="VALUES";

Or

SELECT COLUMN_NAME FROM TABLE_NAME WHERE COLUMN OPERATOR CONDITION;

```
mysql> select d_name from dentist where salary>50000;
+-----+
| d_name |
+-----+
| Dr.Maria |
+-----+
1 row in set (0.00 sec)

mysql> select d_anme from dentist where salary=50000;
ERROR 1054 (42S22): Unknown column 'd_anme' in 'field list'
mysql>
mysql> select d_name from dentist where salary=50000;
+-----+
| d_name |
+-----+
| Dr.Ijaz |
+-----+
1 row in set (0.00 sec)

mysql> select d_name from dentist where salary<50000;
+-----+
| d_name |
+-----+
| Dr.Hassan |
+-----+
1 row in set (0.00 sec)
```

➤ **Logical Operators:**

AND ,OR ,NOT.

```
mysql> select description from treatment WHERE pat_id='102' AND t_id='680';
+-----+
| description |
+-----+
| Removal of a damaged,decayed tooth |
+-----+
1 row in set (0.00 sec)

mysql> select description from treatment WHERE pat_id='102' or t_id='681';
+-----+
| description |
+-----+
| Removal of a damaged,decayed tooth |
| Fitting of dental braces |
+-----+
2 rows in set (0.02 sec)

mysql>
```

➤ **SQL QUERIES BY AND,OR OPERATOR:**

```
mysql> select * from employee where (e_name="Arhum" AND salary=26537);
+-----+-----+-----+-----+-----+-----+-----+
| e_name | JOB | Hire_date | salary | Commession | dep_no | Grade_id | e_no |
+-----+-----+-----+-----+-----+-----+-----+
| Arhum | SI | 2004-03-09 | 26537 | NULL | 11 | 1 | 31 |
+-----+-----+-----+-----+-----+-----+-----+
1 row in set (0.00 sec)

mysql> select Low_Salary from grade where (Grade_id=1 OR Grade_id=2);
+-----+
| Low_Salary |
+-----+
| 2637 |
| 3728 |
+-----+
2 rows in set (0.01 sec)
```

➤ **USE OF MULTIPLE AND OPERATOR:**

```
mysql> select JOB="SI" from employee where(salary>=1900 AND salary<=21000);
+-----+
| JOB="SI" |
+-----+
|      0 |
|      0 |
|      1 |
+-----+
3 rows in set (0.00 sec)

mysql> select JOB="SI" from employee where(salary>=1900 AND salary<=21000);
+-----+
| JOB="SI" |
+-----+
|      0 |
|      0 |
|      1 |
+-----+
3 rows in set (0.00 sec)

mysql> select JOB from employee where(salary>=1900 AND salary<=21000);
+-----+
| JOB |
+-----+
| CONSTBLE |
| COMMANDO |
| SI |
+-----+
3 rows in set (0.00 sec)

mysql> select e_name from employee where (JOB="SI" AND salary >=1900 AND salary<=21000);
+-----+
| e_name |
+-----+
| Fazan |
+-----+
1 row in set (0.00 sec)
```

➤ AND BETWEEN:

It's used where you want to evaluate the values from the range. Within that specific range.

Syntax:

SELECT * FROM TABLE_NAME WHERE(COND_1 AND COND_2 BETWEEN COND_3);

As you can use any column_name rather than the asterisk inside the query.

Example:

```
mysql> select * from dentist WHERE (d_id=2 AND salary BETWEEN 1000 AND 30000);
+-----+
| d_id | FirstName | LastName | salary |
+-----+
| 2 | Farukh | Awais | 17837 |
+-----+
1 row in set (0.00 sec)
```

- OR BETWEEN is same as that of the AND BETWEEN.

➤ IN COMMAND:

It's use to come out the certain value from the list of the table. It's basically used to reduce length which is taken by multiple AND or OR operators.

Syntax:

SELECT COLUMN_NAME FROM TABLE_NAME WHERE COLUMN_NAME IN(V_1,V_2);

Examples:

```
mysql> SELECT * FROM patient where FirstName IN("Arhum","Murat");
+-----+-----+-----+-----+
| p_id | FirstName | LastName | DOB      |
+-----+-----+-----+-----+
| 1    | Arhum     | Rana     | 2001-05-19 |
| 3    | Murat     | Ansari   | 2003-12-05 |
+-----+-----+-----+-----+
2 rows in set (0.00 sec)
```

➤ **LIKE COMMAND:**

As if you want to evaluate a specific personality from a table whose spelling you are specifying in the query or any other name whose end or start or at any middle element you'll be mentioned by you. This command is beneficial at that spot while you want to take a name whose character you'll not be known is advanced.

➤ **Wildcard Characters:**

- %(Represents the single ,null or multiple characters)
- _(Represents a single character)

Syntax: SELECT C_1,C_2 FROM TABLE_NAME WHERE C_NAME LIKE PATTERN;

```
mysql> SELECT * FROM patient where FirstName IN("Arhum","Murat");
+-----+-----+-----+-----+
| p_id | FirstName | LastName | DOB      |
+-----+-----+-----+-----+
| 1    | Arhum     | Rana     | 2001-05-19 |
| 3    | Murat     | Ansari   | 2003-12-05 |
+-----+-----+-----+-----+
2 rows in set (0.00 sec)

mysql> select FirstName ,LastName FROM patient WHERE FirstName LIKE 'A%';
+-----+-----+
| FirstName | LastName |
+-----+-----+
| Arhum     | Rana     |
+-----+-----+
1 row in set (0.01 sec)

mysql> select FirstName ,LastName FROM patient WHERE FirstName LIKE '_UX';
+-----+-----+
| FirstName | LastName |
+-----+-----+
| Murat     | Ansari   |
+-----+-----+
1 row in set (0.00 sec)

mysql> SELECT LastName FROM patient WHERE FirstName LIKE '%_i%';
+-----+
| LastName |
+-----+
| Rahim    |
+-----+
1 row in set (0.00 sec)
```

➤ IS NULL OR IS NOT NULL:

```
mysql> SELECT * FROM visit WHERE FollowUp_visit_id IS NULL;
+-----+-----+-----+-----+-----+-----+-----+-----+
| v_id | visitDate | reason          | Pain_level | FollowUp_visit_id | p_id | d_id | t_id | r_id |
+-----+-----+-----+-----+-----+-----+-----+-----+
| 91   | 2004-09-29 | Routine dental checkUp | 4         | NULL              | 1    | 2    | 101 | 31   |
| 92   | 2001-12-29 | ROOT CANAL        | 7         | NULL              | 3    | 3    | 201 | 32   |
+-----+-----+-----+-----+-----+-----+-----+-----+
2 rows in set (0.01 sec)

mysql> SELECT v_id , visitDate, Pain_level FROM visit WHERE p_id IS NOT NULL;
+-----+-----+-----+
| v_id | visitDate | Pain_level |
+-----+-----+-----+
| 91   | 2004-09-29 | 4         |
| 92   | 2001-12-29 | 7         |
| 93   | 2002-01-19 | 4         |
+-----+-----+-----+
3 rows in set (0.00 sec)
```

➤ AGGREGATION FUNCTIONS:

- COUNT(COLUMN_NAME)
- COUNT(*)
- AVG(COLUMN_NAME)
- MAX(COLUMN_NAME)
- MIN(COLUMN_NAME)
- SUM(COLUMN_NAME)

➤ COUNT COMMAND:

```
mysql> SELECT COUNT(*) AS TOTAL FROM visit ;
+-----+
| TOTAL |
+-----+
| 3     |
+-----+
1 row in set (0.01 sec)

mysql> SELECT COUNT(FollowUp_visit_id) AS the VISITOR FROM visit;
ERROR 1064 (42000): You have an error in your SQL syntax; check the
t" at line 1
mysql> SELECT COUNT(FollowUp_visit_id) AS VISITORS FROM visit;
+-----+
| VISITORS |
+-----+
| 1        |
+-----+
1 row in set (0.01 sec)

mysql> SELECT AVG(r_id) FROM reminder;
+-----+
| AVG(r_id) |
+-----+
| 32.0000   |
+-----+
```

- **COUNT(*)** will display the all the columns which is include in your tables including the **null** values and also the **duplicate** values.
- **COUNT(column_name)** will display ONLY the **single** values and not null vaues.

➤ AVERAGE FUNCTIONS:

Syntax:

SELECT AVG(COLUMN_NAME) FROM TABLE_NAME;

```
mysql> SELECT AVG(r_id) FROM reminder;
+-----+
| AVG(r_id) |
+-----+
| 32.0000 |
+-----+
1 row in set (0.03 sec)

mysql> select AVG( d_id) FROM dentist;
+-----+
| AVG( d_id) |
+-----+
| 2.0000 |
+-----+
1 row in set (0.02 sec)
```

OTHERS functions:

Using Alter command to addup a column is dentist table named aas salary for the aggregate functions.

```
mysql> ALTER TABLE dentist ADD salary INT(255);
Query OK, 0 rows affected, 1 warning (0.04 sec)
Records: 0 Duplicates: 0 Warnings: 1
```

Now insert values in the salary table just for the sack of these functions.

```
mysql> Select MySQL 8.0 Command Line Client
3 rows in set (0.00 sec)

mysql> UPDATE dentist SET salary =17837 where d_id=1;
Query OK, 1 row affected (0.01 sec)
Rows matched: 1 Changed: 1 Warnings: 0

mysql> cUPDATE dentist SET salary =17837 where d_id=2;
ERROR 1064 (42000): You have an error in your SQL syntax; che
ET salary =17837 where d_id=2' at line 1
mysql> UPDATE dentist SET salary =17837 where d_id=2;
Query OK, 1 row affected (0.01 sec)
Rows matched: 1 Changed: 1 Warnings: 0

mysql> UPDATE dentist SET salary=16385 WHERE d_id =3;
Query OK, 1 row affected (0.01 sec)
Rows matched: 1 Changed: 1 Warnings: 0

mysql> select * from dentist;
+-----+-----+-----+-----+
| d_id | FirstName | LastName | salary |
+-----+-----+-----+-----+
| 1 | Nasir | Kazmi | 17837 |
| 2 | Farukh | Awais | 17837 |
| 3 | Sheeza | Rahman | 16385 |
+-----+-----+-----+-----+
3 rows in set (0.00 sec)
```

OTHER functions:

```
mysql> SELECT MAX(salary) FROM dentist Where d_id=2;
+-----+
| MAX(salary) |
+-----+
|      17837 |
+-----+
1 row in set (0.01 sec)

mysql> SELECT MAX(salary) FROM dentist;
+-----+
| MAX(salary) |
+-----+
|      17837 |
+-----+
1 row in set (0.00 sec)

mysql> select MIN(salary) FROM dentist;
+-----+
| MIN(salary) |
+-----+
|      16385 |
+-----+
1 row in set (0.00 sec)

mysql> select SUM (salary) FROM dentist;
ERROR 1630 (42000): FUNCTION dental_clinic.SUM does not exist
mysql> select SUM(salary) FROM dentist;
+-----+
| SUM(salary) |
+-----+
|      52059 |
+-----+
1 row in set (0.00 sec)
```

➤ **GROUP BY :**

```
mysql> select AVG(salary) FROM dentist GROUP BY FirstName;
+-----+
| AVG(salary) |
+-----+
| 17837.0000 |
| 17837.0000 |
| 16385.0000 |
+-----+
3 rows in set (0.01 sec)
```

➤ **HAVING COMMAND :**

It's use as such to apply the conditions indirectly which is not done with the help of where command as while you are dealing with the **GROUP BY** in sql. So for the sack of that purpose you have to use the HAVING to filter out of data or attributes as you want from the table.

➤ Practical Implementations:

```
mysql> select COUNT(*) FROM dentist GROUP BY FirstName having COUNT(d_id) IS NOT NULL;
+-----+
| COUNT(*) |
+-----+
| 1 |
| 1 |
| 1 |
+-----+
3 rows in set (0.00 sec)
```
